(54) Title: METHOD AND SYSTEM FOR DATA BROADCAST FROM A SATELLITE

(54) Titre: PROCEDE ET SYSTEME DE DIFFUSION D'INFORMATIONS DEPUIS UN SATELLITE

(57) Abstract: The invention concerns a method for reducing mutual interference of a digital data transmission or broadcast from a satellite to terrestrial receivers and terrestrial network links using sub-bands each of specific and narrow frequency, belonging to an extended band, the sub-bands being assigned to different terrestrial zones wherein the links are provided. Therefor, the information from the satellite is converted in the form of digital symbols and the digital symbols are distributed over several carriers belonging to a group of carriers distributed in a channel assembly covering at least four of the frequency sub-bands, by spread spectrum.

(57) Abrégé : Le procédé vise à réduire le brouillage mutuel d'une transmission ou diffusion d'information sous forme numérique depuis un satellite vers des récepteurs terrestres et des liaisons d'un réseau terrestre utilisant des sous-bandes chacune de fréquence déterminée et étroite, appartenant à une bande étendue, les sous-bandes étant affectées à des zones terrestre différentes au sein desquelles s'effectuent les liaisons. Pour cela on met l'information provenant du satellite sous forme de symboles numériques et on distribue les symboles numériques sur plusieurs porteuses appartenant à un groupe de porteuses qui sont réparties dans l'ensemble d'un canal recouvrant au moins quatre des sous-bandes de fréquence, en effectuant un étalement de spectre.
